Newsletter – Issue #3

The LEGACy team wishes you happy holidays!

Welcome to the third LEGACy newsletter. This is part of a twelve-part series, one published every four months. To forward this newsletter, make sure to use [this link](#). If someone forwarded you this newsletter [do not forget to subscribe](#).

Video on Early Detection and Prevention

One of the aims of the LEGACy project is to educate those with higher risk of getting gastric cancer earlier and improve the early detection of gastric cancer when the prognosis is still higher. The LEGACy video titled 'Early Detection and Prevention of Stomach Cancer' works towards this goal by educating on the signs and symptoms, risk factors and risk prevention associated with gastric cancer.

Spanish Material

To ensure we reach the Spanish speaking communities within and outside the LEGACy consortium we have translated our video on brochure on ‘Early Detection and Prevention of Stomach Cancer’ to work towards our goal of educating on the signs and symptoms, risk factors and risk prevention associated with gastric cancer.

Aras de Olmos Retirement Home

Dr. Marisol Huerta, Dr. Tania Fleitas and Juan Carbonell from INCLIVA visited an Aras de Olmos retirement home to educate on signs and symptoms, risk factors, risk prevention and early detection of gastric cancer.

The group of about fifty people were shown a video about gastric cancer and leaflets on gastric cancer were distributed. A debate was opened to clarify the doubts and concerns of the attendees. A survey among attendees was conducted before and after in order to know both their previous knowledge and what they had learned about gastric cancer following the education.

EULAC PerMed

Dr. Tania Fleitas Kanonnikoff, LEGACy Scientific Coordinator, participated in the

personalized medicine between Europe and Latin America and the Caribbean (LAC). Dr. Fleitas focused her presentation on the strategy of the LEGACy project. EULAC-PerMed project is also funded by the European Commission through Horizon 2020.
