MERKEL CELL CARCINOMA
ECPC AWARENESS CAMPAIGN

JOIN THE CAMPAIGN!

Merkel Cell Carcinoma (MCC) is a type of skin cancer that can progress and spread rapidly. It is difficult to treat when detected later. ECPC emphasises the importance of educating the general public about prevention, self-examining and warning signs. Merkel Cell Carcinoma, as other types of skin cancer, can be detected early as this cancer develops on outside of the body. With early detection, MCC can be cured successfully. Moreover, it is possible to reduce the risk of developing MCC by taking preventive measures. Therefore ECPC is launching a social media campaign to bring the attention of a broader audience to this rare and aggressive disease.

SUGGESTED SOCIAL MEDIA CAPTIONS:

Do you know what #MerkelCellCarcinoma is? It is an aggressive form of #sickncancer that can be prevented with skin protection.

📍 Use sun protection and protect yourself 🤧

Early diagnosis is essential as #MerkelCellCarcinoma can rapidly spread. Delays in detection hamper the possibility of successful treatment 🛑
